

## **FACT SHEET**

### **WHAT IS THE DIFFERENCE BETWEEN A 5, 50 AND 100-YEAR FLOOD EVENT?**

A flood event with a 20%, 2% and 1% probability of occurring in any given year, respectively

### **HOW DOES THIS PROJECT AFFECT ME?**

Construction will begin later this summer. Common travel routes to and from your business or home may be disrupted periodically for construction activities. The City will work towards minimizing disturbance to you and the neighborhood during this time period.

### **Project Need**

The Sunrise Neighborhood has stormwater pipes that are approximately 100 years old and are in poor condition. This situation can lead to localized flooding after a rain storm.

### **Project Overview**

The City of Greeley has launched a study to define and prioritize the drainage solutions for the Sunrise Neighborhood. This project will replace several of the more damaged, or non-functional sections of pipe in the neighborhood to improve drainage and reduce flood potential to properties and public areas. Construction involves moving some existing utilities and placing storm sewer under the streets to carry stormwater. This project will improve drainage by replacing aging and non-functioning storm sewer systems. Streets throughout the neighborhood will be paved over the next three years.

**Additional information on the Sunrise Neighborhood Improvements can be found at [OperationRainDrain.com](http://OperationRainDrain.com)**

## **PROJECT BENEFITS**

**Improve Drainage • Reduce Flood Potential**

### **How to become involved:**

Public Works Stormwater staff is asking for your input. If you live, work or play in the Sunrise area you are invited to participate. Share your observations, comments and concerns. Public Works staff wants to know where you see flooding, how often it occurs and perceived causes.
