

# **README FILE FOR STANDARD DETAILS USED IN THE DESIGN CRITERIA AND CONSTRUCTION SPECIFICATIONS MANUAL - STREETS**

Revised JULY, 2015

Two sets of files have been established for electronic distribution.

PDF – These files are for printing and viewing and can (although not recommended) be used for insertion into construction drawings. We have found that print quality diminishes with the use of PDF files.

DWG - Consultants should use these drawing files to insert into a set of construction plans. This readme file deals primarily with the AutoCAD drawings.

“Street” details should be used in new construction plans. Included with the download is a plot file (newCOG-PW 051811.ctb) to incorporate into your drawings. The plot style is color based. It is highly recommended to use this plot file.

Included with the standard details are 2 additional drawings that can be used in the construction plans.

**PUBLIC WORKS SIGNATURE BLOCK** – The City of Greeley’s signature block is required on all construction drawings. This is not all-inclusive, as additional signatures may be required, depending on the drawing purpose. Remove the border and title block.

**UTILITY NOTIFICATION NOTE** – This drawing should be included on all construction sheets as a reminder to the contractor for utility locates. Remove the border and title block.

Should the engineer decide to revise any of the standard details, the City logo and standard detail numbers shall be removed.

Details have been saved as AutoCAD version 2013.

If you encounter problems in using these details please contact Dave Wells with the City of Greeley’s Engineering Division, at 970-350-9796.
