

SPECIFICATIONS FOR HANGING BANNERS

A banner permit fee of \$325 will be assessed for each two weeks a banner location is reserved. Permit fees shall be paid at the time of request for the banner permit. The two-week periods may be reserved twelve (12) months prior to the requested banner installation date. In the event more than one request/application is received for a specific installation date and the conflict cannot be resolved between the applicants by scheduling the banner space within a prior two-week period, (providing space availability) a drawing will take place to determine banner placement. Revenue generating requests shall take priority at all times over non-revenue generating requests.

Permission to hang banner will be granted by the Public Works Department based on an approved, paid permit, acceptable message content (no political or commercial advertising), and specified banner construction. The Public Works Department will notify the permit holder regarding any banner not considered safe or conforming to specifications.

Banners shall conform to the following specifications. Only banners 35 to 40 feet in length will be hung. Each banner must have ninety (90) feet of rope on both the top and the bottom. Rope shall be a minimum of 3/8" soft nylon rope and must have a working strength of 450lbs.

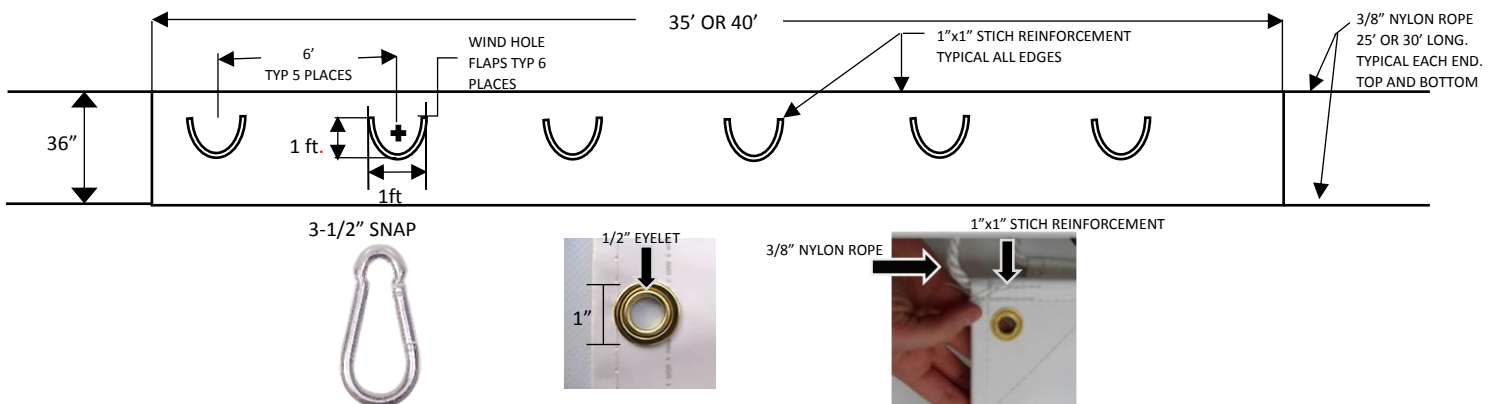

The banner shall be of 16oz. or greater vinyl coated material (not vinyl laminated) before treatment. It shall be no more than three (3) feet from the top to bottom or no less than 36" wide. The rope shall be sewn in the top and bottom full length, with grommets located below the rope hem on the top. The grommets shall be no more than four (4) feet apart on top, with no less than seven (7) grommets on the bottom one grommet on each corner with the others spaced evenly between. There shall be no less than six (6) wind holes in a banner. These wind holes shall be round shaped, one (1) foot in diameter with top flap attachment reinforced as shown on attached diagram.

Snap hooks must be furnished in the same number as the number of grommet holes in the banner and snap hooks installed in all eyelets prior to delivery.

Banners must be delivered to the Traffic Division, 1300 A Street, five (5) working days prior to installation for inspection and approval. Damaged banners shall be removed immediately. All banners must be picked up within five (5) working days of scheduled removal or storage charge will be assessed. The Traffic Division is not liable or responsible for any banner that is not picked up in thirty (30) days from scheduled removal date.

For a 35" banner, eleven (11) eyelets are required across the top, and seven (7) along the bottom (**no more, no less**).

For a 40" banner, twelve (12) eyelets are required across the top, and eight (8) along the bottom (**no more, no less**).

Due to public safety, you must adhere to these standards, as the banners are hung over roadways with large traffic volumes. Our weather conditions in Greeley are sometimes unpredictable, (high winds) which can cause damage to the banner and whatever is below the banner, i.e. cars and pedestrians.

Please follow these specifications. Any problems or questions, please call 970-350-9355. Thank you!

SERVING OUR COMMUNITY – IT’S A TRADITION

To provide for the design, construction, maintenance, and operation of that art of the City’s infrastructure that is critical to the safe and efficient movement of pedestrians, traffic, goods, and emergency services.
